

# synapseRT

synapseRT is a Requirements & Test management system which leverage the flexibility and extensibility of Jira. Business, Development and Testing teams can now see, work, relate & track the entire concept to market process from just inside Jira as it takes away the need to hop between different systems to manage different things; get away with the mess of integrating systems and stay collaborated at one place.

This document is aimed to help the synapseRT users understand the product's glossary of terms and help understand the various structural representation of data in order to get the most out of the product.
